

Happy Island

MOVE FOR ONE

「福島・FUKUSHIMA」=「Happy」「Island」

Since the earthquake, Fukushima has been suffering so much from the nuclear plant.
Let's take Fukushima as a symbol for rebuilding
and support all actions concerning reconstruction of damaged areas in east japan from all over the world!

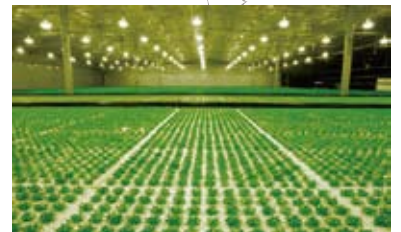

Making Fukushima into a real Happy Island

- Making Fukushima a Land with Full Nature Recycling System
- Making Fukushima a Self Organized Land needless of any support from the outer world
- Becoming the place of dispatch in leading edge ecology and free energy
- As a result, becoming an ideal model for developing a region anywhere in the world

What we can do for example

- Meetings and events organized by the citizens of Fukushima
- Having a contest gathering researchers and developers in making free energy and water purification device from all over the world
- Proving the efficiency by clinical data and having a presentation. Letting the people decide and use the technology
- Gathering people to see what we are doing in Fukushima

*Let us people change the world.
We already have it all.*

Can't we make the most dangerous land to live, Fukushima, into "the most want to live land" ?
If we make it happen, the world should definitely be amazed!

We should not waste time on criticizing the government. The government has their own things to do. We have our own.
We already have many. It is neither the top, policy, nor social system that has to change.
It is "Us". What is important is that it is not who started this project,
but to move and spread the Happy Island Movement by the ones who realize. Let's make it happen!

- # It is free to copy, use, and change any part of this document. Please tell it in your own words.
- # Let's spread it by any web tool (facebook, twitter, myspace, mixi, gree, blogs etc.) you know all over the world.
- # This is a movement. No leader or headquarter. Make it when you need it.
- # Please share any activity on the web etc. when you do it.
- # No race. Share, realize, and accept each others experience to make the next civilization by our own hands.
